

## Shorebirds Recorded in the United States of America and Canada

This list includes shorebirds that have been recorded in the American Birding Association (ABA) Checklist area, which includes the 49 continental United States, Canada, the French islands of St. Pierre and Miquelon and adjacent waters to a distance of 200 miles from land or half the distance to a neighboring country, whichever is less. Although Hawaii is not included, no additional shorebird species have been recorded in the Hawaiian Islands that are not listed below.

The ABA Checklist includes ABA-area breeding species, regular visitors, and casual and accidental species from other regions that are believed to have strayed here without direct human aid, and well-established introduced species that are now part of our avifauna. The list is current as of July 2016. Occurrence codes used in the ABA checklist are also given and defined below (see <http://listing.aba.org/aba-checklist/>).

### Occurrence definitions

Regular – Regularly occurring North American avifauna, usually widespread and fairly numerous.

Local – Occur in low densities or have restricted ranges.

Rare – Occur in very low numbers, but annually and includes visitors and rare breeding residents.

Casual – Not recorded annually but with six or more total records, including three or more in the past 30 years.

Accidental – Recorded five or fewer times or fewer than three records in the past 30 years.

Likely Extinct or Extirpated – Probably or actually extinct or extirpated from the ABA Checklist Area.
